## MAYOR'S REPORT <br> ST. PETERSBURG REDISTRICTING 2022

The following redistricting report has been prepared by City staff under supervision of the Mayor as required by St. Petersburg Charter section 5.06.

## Census 2020 Data

A required by the City Charter, the 2020 U.S. Census is the basis for redistricting City Council districts. The Census indicates that the City's population increased from 244,769 in 2010 to 258,308 in 2020, an increase of $5.5 \%$, resulting in population changes in all residential St. Petersburg Census Tracts. A total of 59 Census Tracts gained population and 24 Census Tracts lost population during this period (Exhibit 1). The largest population increases occurred in the Tracts located in downtown, resulting in an additional 4,767 residents, and north of Gandy Boulevard, adding an additional 3,250 residents. City Council District 6 saw the greatest increase in population, adding 5,730 residents. City Council District 1 saw the greatest decrease in population, losing 214 residents since 2010 (Exhibit 2). Six of the eight City Council Districts saw population increases since 2010.

## Standards for Redistricting

Charter subsections 5.06(a) and (c) establish standards for drawing district boundaries, which can be summarized as follows:

- There must be eight districts.
- Each district must be "formed of compact, contiguous territory."
- Boundary lines must "follow the centerlines of streets, railroad lines or other natural boundaries where possible."
- Boundaries must "follow voting precinct lines to the extent that it is practical without compromising the requirements of the previous sentence."
- Districts must be "based upon the principle of equal and effective representation as required by the United States Constitution and as represented in the mathematical preciseness reached in the legislative apportionment of the state."

In addition to those requirements established by the Charter, certain requirements are also imposed by the following authorities:

- The Federal Constitution (to the extent not already addressed by the Charter requirements).
- Federal statutory and regulatory law (including the Voting Rights Act of 1965).
- The Florida Constitution.
- The Florida Statutes.

## Population Deviation

As noted above, Charter section 5.06 requires that districts must be "based upon the principle of equal and effective representation as required by the United States Constitution and as represented in the mathematical preciseness reached in the legislative apportionment of the state."

The target population for each Council district based on the 2020 Census data is the total City population $(258,308)$ divided by the number of City Council districts $(8)$, which results in a target of 32,289 people per district.

Pursuant to the Charter provision quoted above, the population of Council districts may deviate from the target as long as that deviation does not exceed the deviation that occurred during the most recent statewide redistricting. The ability to deviate from the target population provides the flexibility necessary to address other redistricting requirements and considerations-including drawing districts that are compact and keeping neighborhoods within a single district.

The most common method of determining deviation in the redistricting context is known as "overall range" and is described by the National Council of State Legislatures as follows: ${ }^{1}$

Overall range is perhaps the most commonly used measure of population equality, or inequality, of all districts, which can be expressed as a percentage (relative) or the actual population numbers (absolute). The "range" is a statement of the population deviations of the most populous district and the least populous districts. (For example, if the ideal district population is 100,000, the largest district in the plan has a population of 102,000, and the smallest district has a population of 99,000, then the range is $+2,000$ and $-1,000$, or +2 percent and -1 percent.) The overall range is the difference in population between the largest and the smallest districts, expressed as a percentage or as the number of people. (In the preceding example, the "overall range" is 3 percent or 3,000 people.)

[^0]The "overall range" method described in the excerpt above is the same method used to determine deviation for Florida's most recent redistricting effort, which resulted in U.S. congressional districts with $0.00 \%$ overall deviation, Florida Senate districts with $1.92 \%$ overall deviation, and Florida House districts with $4.75 \%$ overall deviation.

Accordingly, the City Attorney's Office has advised that there are two practical consequences to the Charter requirement that redistricting achieve "the mathematical preciseness reached in the legislative apportionment of the state:"

- First, the City should calculate deviation in the same manner that the state does.
- Second, the outer bound for the deviation of City districts should be the outer bound for the deviation of state districts - which, at present, is the Florida House figure of 4.75\%.

The ESRI Redistricting software licensed by Administration to support the Citizens Redistricting Commission is the same software used by the state for its most recent redistricting efforts. Accordingly, it is straightforward to apply the same method of calculating deviation.

Applying that method to the current Council districts using population data from the 2020 Census demonstrates that the overall range for the current districts is $18.89 \%$-well outside the $4.75 \%$ outer bound found in current districts at the state level. Accordingly, redistricting will be required to achieve compliance with the apportionment standards in the Charter.

## Changes to Pinellas County Voting Precincts

As noted above, boundaries must also "follow voting precinct lines to the extent that it is practical without compromising the requirements of the previous sentence [concerning compact and contiguous territory and following artificial and natural boundaries]."

Earlier in 2022, following redistricting of State and County legislative districts based on 2020 Census data, Pinellas County amended 26 out of 86 current voting precincts in St. Petersburg (Exhibit 4), impacting all City Council districts. Pursuant to the Charter requirement noted above, City Council district boundaries cannot split voting precincts unless required for compliance with higher-priority requirements. Accordingly, redistricting should also allow, where practical, Council districts to conform to current voting precinct boundaries (Exhibit 5). Detailed precinct demographics are provided in Exhibit 6.

## Summary and Conclusion

Population changes throughout St. Petersburg and changes to the Pinellas County voting precincts will require redistricting of St. Petersburg City Council districts in accordance with the process established by Charter section 5.06.
